## 1．APPLICATION

NIVOSWITCH R－300 series vibrating forks are for level detection of powder，lumpy solids and granules． Overfilling and emptying of silos or vessels can be prevented when using them as high or low fail－safe switches．The RC series（basic type insertion length $=125 \mathrm{~mm}[4.94]$ ）with casted forks are recommended for small granules，while the RL series（basic type insertion length $=137 \mathrm{~mm}\left[5.4^{4}\right]$ ）with welded forks are recommended for larger granules．Both RC and RL series are also available in dust Ex versions．

## 2．TECHNICAL DATA

## 2．1 GENERAL DATA

| Type |  | R $\square \square$－3 $\square \square-\square, \mathrm{R} \square \square$－3 $\square \square$－$\square \mathrm{Ex}$ |
| :---: | :---: | :---: |
| Medium pressure |  | $40 \mathrm{bar}(580 \mathrm{psi}), 6 \mathrm{bar}(87 \mathrm{psi})$ with PP flange See Derating diagram |
| Insertion length |  | $0.125 . . .3 \mathrm{~m}$（4．9＂．．． 10 feet） |
| Material of wetted parts |  | Casted fork DIN 1．4404，welded fork DIN 1.4571 |
| Medium temperature |  | $-40 \ldots+130^{\circ} \mathrm{C}\left(-40 \ldots+266{ }^{\circ} \mathrm{F}\right)$ ，See Derating diagram |
| Ambient temperature |  | $-40 \ldots+70^{\circ} \mathrm{C}\left(-40 \ldots+158^{\circ} \mathrm{F}\right)$ ，See Derating diagram |
| Medium |  | $\rho \geq 0.01 \mathrm{~kg} / \mathrm{dm}^{3}$ |
| Switching delay | Getting immersed | 0.5 sec |
|  | Getting free | $\leq 1 \mathrm{~s}-$ selected high density（H）$\left(\rho \geq 0.5 \mathrm{~kg} / \mathrm{dm}^{3}\right)$ <br> $\leq 3 \mathrm{~s}$－selected low density（ L ）$\left(\rho<0.5 \mathrm{~kg} / \mathrm{dm}^{3}\right)$ |
| Indication of operation |  | Bi－color LED |
| Test of operation |  | Output state can be changed with test magnet |

## 2．2 TWO－WIRE DC VERSION

| Type | 2－WIRE DC |  |
| :---: | :---: | :---: |
|  | R $\square \square-3 \square \square-6$ | Rロロ－3口ロ－7 |
| Electric connection | Connector | 3 m （10 feet）cable（ $2 \times 0.5 \mathrm{~mm}^{2}$［AWG20］） |
| Ingress protection | IP65 | IP68 |
| Output | DC current change：fork free： $9 \pm 1 \mathrm{~mA}$ ；fork immersed： $14 \pm 1 \mathrm{~mA}$ |  |
| Power consumption | ＜0．5 W |  |
| Supply voltage | 15．．． 27 V DC |  |
| Selection of operation | LOW fail－safe L or HIGH fail－safe H on suggested isolator，by switch |  |
| Selection of sensitivity | By inverting the polarity of connection |  |
| Electric protection | Class III |  |

### 2.3 2－WIRE AC，3－WIRE DC VERSION

| Type |  | 2－WIRE AC |  | 3－WIRE DC |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | R $\square \square-3 \square \square-1$ | R $\square \square-3 \square \square-2$ | R $\square \square-3 \square \square-3$ | R $\square \square-3 \square \square-4$ |
| Electric connection |  | connector | 3 m （10 feet）cable， $4 \times 0.75 \mathrm{~mm}^{2}$（AWG18） max．cable length 30 m （100 feet） | connector | 3 m （10 feet）cable $5 \times 0.5 \mathrm{~mm}^{2}$（AWG20） max．cable length 30 m （100 feet） |
| Ingress protection |  | IP65 | IP68 | IP65 | IP68 |
| Selection of operation （Low fail－safe－L，High fail－safe－H） |  | By altering the connection |  | By switch on the cover | By inverting the polarity of connection |
| Selection of density．（Low density－L，high density－H） |  | Not possible $\rho \geq 0.5 \mathrm{~kg} / \mathrm{dm}^{3}$ |  | By switch on the cover | With wiring |
| Output |  | serial AC output |  | By changing polarity NPN－ and PNP transistor switch | Galvanically isolated PNP／NPN transistor switch |
| Output protection |  | － |  | changing polarity，over surge，short cut |  |
| Supply voltage |  | 20．．． | $55 \mathrm{~V} \mathrm{AC}, 50 / 60 \mathrm{~Hz}$ | $12 . .55 \mathrm{~V}$ DC |  |
| Power consumption |  |  | pending on load | ＜0．6 W |  |
| Voltage drop between terminal points during operation |  |  | ＜ 10.5 V | 0．．1．8 V |  |
| Electric protection |  | Class I |  | Class III |  |
| Current load | max．continuous | 350 mA AC 13 | for Ex version（C，D） 140 mA | $I_{\text {max }}=350 \mathrm{~mA}$ for Ex version $200 \mathrm{~mA} \mathrm{DC} / \mathrm{U}_{\text {max }}=55 \mathrm{~V}$ DC |  |
|  | min．continuous | $10 \mathrm{~mA} / 255 \mathrm{~V}, 25 \mathrm{~mA} / 24 \mathrm{~V}$ |  | － |  |
|  | max．impulse | $1.5 \mathrm{~A} / 40 \mathrm{~ms}$ |  | － |  |
| Residual current after switch off |  | $<6 \mathrm{~mA}$ |  | $<10 \mu \mathrm{~A}$ |  |
| Mark of explosion protection |  |  |  |  |  |

## 2．4 Accessories

－User＇s Manual
－Warranty Card
－EU Declaration of Conformity
－ $1 \times 2 \mathrm{~mm}(0.08$＂）thick KLINGER OILIT seal

Components and accessories（sold separately）：
－RPS－101 type screw driver with test magnet
－Sliding sleeve：RPH－112（max．up to 6 bar［87 psi］medium pressure）
$\square$ - 3

### 2.8 MATERIALS

With integral cable
3. INSTALLATION

Prevent device from being damaged during delivery, storage, mounting and test.
(s)

Before installation it is advised to try the operation of the level switch in a small sample of material in order to set the proper density. Tightening of the model with thread process connection should only be done with open end SW41, SW46 or SW55 spanner.

For positioning of the fork tine use the marking on the hexagonal neck.
The recommended mounting position of the fork for light, free flowing solids, is vertical (top) mounting. Side mounting is recommended only in cases when the fork-tines are easily freed from the process medium. In case of side mounting,
NIVOSWITCH must be mounted with the fork-tines standing vertically.
When determining mounting location, take into account the possible caving or arching of the material in the tank.
The fork should be protected against falling materials. This is to be done so that material could not clog between the fork and the protection plate.

## 4. WIRING

IMPORTANT! The NIVOSWITCH level switches incorporate overvoltageprotection circuit. Nevertheless, this overvoltage protection may not be enough in case of inductive loads. It is recommended to use external protection circuits installed next to the inductive loads (the suitable schematic diagrams can be found in the catalogues of the relay manufacturers).

### 4.1. 2-WIRE AC

## R $\square \square-3 \square \square-1$ with connector R $\square \square-3 \square \square-2$ with cable

## THE UNIT SHOULD NOT BE POWERED UP WITHOUT GROUNDING AND

 EXTERNAL LOAD!

Terminal block cover can be rotated in $90^{\circ}$ steps to ensure appropriate cable positioning.
4.1.2. Integral cable version $\quad \mathrm{R} \square \square-3 \square \square-2$

The integrated cable has 4 wires. The connection to the AC network is done with 3 wires. Since there cannot be any unconnected wire all the 4 wires should be connected to a junction box as seen below.

### 4.2. 3-WIRE DC VERSION <br>  <br> Rㅁㅁ-3ロロ-4

In case of overload caused by short circuit, the transistor will switch on and off, and the LED will start to blink.
4.2.1. Connector version R R $\quad$-3 $\square \square-3$

4.2.1.1. Wiring diagram of the 3 -wire DC connector version with relay

Terminal block cover can be rotated in $90^{\circ}$ steps to ensure appropriate cable positioning.
4.2.1.2. Wiring diagram of the 3 -wire DC connector version with PLC

PNP wiring

4．2．2．Integral cable version RDD－3Dロ－4
4．2．2．1．Wiring with relay
PNP wiring－high（ H ）density（ $\rho \geq 0.5 \mathrm{~kg} / \mathrm{dm}^{3}$ ）

PNP output－low（L）density（ $\rho<0.5 \mathrm{~kg} / \mathrm{dm}^{3}$ ）

NPN wiring－high（H）density，（ $\rho \geq 0.5 \mathrm{~kg} / \mathrm{dm}^{3}$ ）

NPN wiring－low（L）density（ $\rho<0.5 \mathrm{~kg} / \mathrm{dm}^{3}$ ）

4．2．2．2．Wiring with PLC
4．2．2．3．PNP wiring high $(\mathrm{H})$ density，$\left(\rho \geq 0.5 \mathrm{~kg} / \mathrm{dm}^{3}\right)$

PNP wiring－low（L）density（for solids：$\rho<0.5 \mathrm{~kg} / \mathrm{dm}^{3}$ ），

4．3．2－WIRE DC VERSION

## 4．3．1．Connector version

## Rロロ－3ロロ－6

|  |  |
| :---: | :---: |
| $H$ density（ $\rho \geq 0.5 \mathrm{~kg} / \mathrm{dm}^{3}$ ） | L density（ $\rho<0.5 \mathrm{~kg} / \mathrm{dm}^{3}$ ） |
| 4．3．2．Integral cable version | Rपロ－3口ロ－7 |
|  |  |
| $H$ density（ $\rho \geq 0.5 \mathrm{~kg} / \mathrm{dm}^{3}$ ） | L density（ $\rho<0.5 \mathrm{~kg} / \mathrm{dm}^{3}$ ） |

5．SET UP，ADJUSTMENT，PUTTING INTO OPERATION
Check wiring and setting of switches（if any）．After powering up the vibrating fork is operational．The operation is summarised in the table below

| Power supply | Fork | Mode | Display （LED） |  | Output |
| :---: | :---: | :---: | :---: | :---: | :---: |
| ON |  | High | Red | OFF |  |
|  |  | Low | Green | ON |  |
|  |  | High | Green |  |  |
|  |  | Low | Red | OFF | $I_{\text {min }}^{V_{L}} \int_{\text {OFF }}^{-\bullet}$ |
| NONE | $\begin{gathered} \text { Free } \\ \text { or } \\ \text { immersed } \end{gathered}$ | $\begin{aligned} & \mathrm{H} \\ & \text { or } \\ & \text { L } \end{aligned}$ | Off |  |  |

State of operation of the 2－wire DC version

| Fork |  | Display（LED） | Output |
| :---: | :---: | :---: | :---: |
| Immersed | Red | $14 \pm 1 \mathrm{~mA}$ |  |
| Free | Green | $9 \pm 1 \mathrm{~mA}$ |  |

## OPERATION TEST

Operation of the switch can be verified with the help of the optional screwdriver with magnet（RPS－101）．
When moving the magnet in front of the marking on the enclosure the state of the switch（color of the LED）should be changed．

## 6．MAINTENANCE AND REPAIR

The device does not require regular maintenance．In some instances，however，the vibrating section may need to be cleaned from material deposits．This must be carried out carefully．The warranty card contains the terms and conditions． Before returning the device for repairs，it must be cleaned thoroughly．The parts in contact with the medium may contain harmful substances；therefore，they must be decontaminated．
Our official form（Returned Equipment Handling Form）must be filled and enclosed in the parcel．Download it from our website www．nivelco．com．The device must be sent back with a declaration of decontamination．A statement must be provided in the declaration that the decontamination process was successfully completed and that the device is clean from any hazardous substances．

## 7．STORAGE CONDITIONS

Ambient temperature：$-25 \ldots+70^{\circ} \mathrm{C}\left(-13 \ldots+158{ }^{\circ} \mathrm{F}\right)$
Relative humidity：max．98\％
